AL Submitted (14-MAR-2002) Wellcome Trust Sanger Institute, Hinxton, Submitted (14-MAR-2002) Wellcome Trust Sanger Institute, Hinxton, Submitted (14-MAR-2002) Wellcome requests: clonerequest@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk on Mar 21, 2002 this sequence version replaced gi:17902958.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >- 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSROT; Tr:, TREMBL; WP:, WORWPEP; Information on the WORWPEP
                                                                                                                                                                                                                  AL604066 184151 bp DNA linear ROD 14-MAR-2002 Mouse DNA sequence from clone RP23-174M12 on chromosome 11, complete sequence.

First strand cDNA was primed with a primer [5' GAGAGAGAAGGACCAACCATTTTTTTTTTTTVN 3'), cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 3.0 and subtraction to adapter of sequence [5'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (10-JUL-2000) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute: 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa 230-0045, Japan (E-mail:genome-reségsc.riken.go.jp, URL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222,

polylinker: Site_1: Not I; Site_2: Eco RI: The
will-BMAP_MCO_N library is a normalized library constructed
from mouse cortex. The tag is a string of 5 nucleotides
present between the Not I site and the oligo-dr track.
The library was constructed as described by Bonaldo,
Lennon and Soares, Genome Research 6: 791-806, 1996.
Tissue provided by Ms. Annie Novakovich, Zivic-Miller

modified polylinker; Site_1: ECOR I; Site_2: Not I;

UI-E-EJO is a subtracted cDNA library constructed
according to Bonaldo, Lennon and Soates, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an ECOR I adaptor, digested
with Not I, and cloned directionally into pT773-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contenins a library tag sequence-that is
located between the Not I site and the (dT)1B tail. The
sequence tags for this library are: fetal eyes AGAATCAAGA;
ilens, CGATTAGCGA; eye anterior segment, AATGCCGCAT;
optic nerve, CCATTAGCGS; retina, CGCGC; Retina Foveal and
Macular, GTCC; RPE and Choroid, ACCTA. This library was
created for the program, Gene Discovery in the Visual
System, supported by National Eye Institute (NEI):"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Koonin E.V., Rudd K.E.;
Submitted (SEP-1995) to the SWISS-PROT data bank.
-!- FUNCTION: Catalyzes the formation of alpha-ketobutyrate from
threonine in a two-step reaction. The first step is a dehydration
of threonine, followed by rehydration and liberation of ammonia.
-!- CATALYTIC ACTIVITY: L-threonine + H(2)O = 2-oxobutanoate + NH(3) +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN=Rd / KW20 / ATCC 51907;

The first step is a dehydration of threonine, followed by rehydration and liberation of ammonia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Complete genome sequence of Salmonella enterica serovar Typhimurium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- COPACTOR: PYRIDOXAL PHOSPHATE.

"Structure and control of pyridoxal phosphate dependent allosteric
threonine deaminase.";
Structure 6:465-475(1998).
-:- FUNCTION: Catalyzes the formation of alpha-ketobutyrate from
threonine in a two-step reaction. The first step is a dehydration
of threonine, followed by rehydration and liberation of ammonia.
Deaminates L-threonine, but also L-serine to a lesser extent.
-:- CATALYTIC ACTIVITY: L-threonine + H(2)O = 2-oxobutanoate + NH(3) +
                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE FROM N.A.
